**Safe  
Footing**

**GS PADDOCK**

***Paddocks, paddock access ways, riding paths – when the weather is bad, it is the same problem everywhere.***

Horses and cows sink in mud and dirt. But this is over now! With **GS PADDOCK**, which was developed especially to meet the requirements of your horses and cows, these problems belong to the past.

The viscous-elastic **GS PADDOCK**, offers the same elasticity as a dark horse hoof, it is applied on a thin layer of gravel, then filled with coarse sand, lava or fine gravel and ready is your paddock.

**GS ELASTIC**

## **Dressage, Jumping & Western Grounds**

***GS ELASTIC is an extremely elastic grid for riding grounds, which separates base and treading layer in a very effective way, by doing this it will remaining waterpermeable towards the bottom which guarantees an extremely good water drainage.***

**groundsolutions.ca**

Our long-lasting experience has taught us what is important in dressage sport. Shock-absorbant, joint-gentle, extremely light grounds with a good grip which enable an outstanding riding feeling – such as forest grounds. Of course water drainage plays a major role regarding all-weather grounds.

Especially in show-jumping a non-slipping ground is of utmost importance. At the same time the ground should have a certain hardness without imparting strain onto the joints of the horse.

***Only if rider and horse feel absolutely secure, top performances can be obtained.***

Waterpermeable but at the same time extremely non-slipping and elastic.
