

Anti Graffiti Surface Coating

Specially developed GS 211 UV stabilized coating can be used on surfaces such as Stone, Paint, Wood, Metal etc. Surface areas have to be clean and dry prior to installation.

Installation must be done in such a manner as to form a continuous film that fills any pores. Only one application is possible.

The final look of the applied GS 211 will be clear and glossy. Due to the special formulation of GS 211 paints, lacquers and many other substances can be easily removed as they are not able to penetrate to the underlying material.

GS 211 is also safe for use in the food processing industry.

In most cases GS 211 is moisture resistant but in the case of hydrostatic water pressure under new concrete surfaces, care must be taken to ensure the concrete is properly cured.

Technical data:

Color: transparent

Processing time:

depending on the ambient temperature, 15 to 60 minutes

Minimum layer thickness: approx. 0.2 mm

Minimum coating ambient temperature: +10 C

All application methods like paint brush and roller are acceptable.

For more information please request GS 212 technical data sheet
